

Release Notes

Teamstudio Export 2.1.0

Teamstudio Export 2.1.0 is a feature update to Export. New features include

- Applications exported to HTML will now run inside SharePoint
- Attachments that are not stored in rich text will now be included in the HTML export

Additionally, there are a number of fixes to attachment handling and international support.

Please refer to [Installing Teamstudio Export](#) for details on system requirements and installation. This page will be updated with any known issues and fixes as they become available.

Fix List

Export 2.1.0

- [TMS-1178] - Attachments with invalid characters in their file names cause the export to fail
- [TMS-1181] - Attachments with very long file names can cause export to fail
- [TMS-1184] - Invalid characters in view data can cause export to fail
- [TMS-1189] - Attachments that aren't in rich text don't show up in HTML output
- [TMS-1191] - 0 byte attachments can cause HTML export to fail
- [TMS-1193] - Error messages from DXL Exporter are corrupted in the Export UI on non-US machines
- [TMS-1194] - Sharepoint requires an aspx index page and no more than 5000 files per folder
- [TMS-1196] - The DXLExporter version number should be visible in the Export About dialog.

Export 2.0.0

- [TMS-1153] - Multi-select in list of Notes databases
- [TMS-1156] - Support for filtering and ordering fields
- [TMS-1160] - HTML documents should have their form name set on the top-level json object
- [TMS-1162] - Regular doclinks are not visible in the HTML output
- [TMS-1163] - We should clear existing HTML content before exporting
- [TMS-1164] - Allow searching in the main window's list of databases
- [TMS-1165] - Refreshing the UI is slow
- [TMS-1166] - Support for doclinks in external databases
- [TMS-1168] - The 'document' count in the HTML list of views is actually a count of rows, not documents
- [TMS-1170] - Improve the error message when the notes.ini location is invalid
- [TMS-1171] - Add demo mode that limits archiving to the first 10 entries in each view
- [TMS-1172] - Write a default static viewer config file in the config directory if one does not already exist
- [TMS-1173] - Tab characters in attachment filenames cause 'Illegal characters in path' error during export
- [TMS-1174] - Line breaks in rich text are in the wrong place when exported to HTML
- [TMS-1175] - Not possible to view the bottom of rich text fields that are taller than the screen
- [TMS-1176] - Some attachment names generate bad links in the HTML export
- [TMS-1177] - Support for filtering views

Export 1.0.2

- [TMS-1149] - @Error values in numeric fields cause FormatExceptions in HTML export
- [TMS-1150] - Documents that fail during archive cause HTML export to fail with missing root element
- [TMS-1155] - UI is left in an inconsistent state if refresh fails owing to, e.g. an unavailable server
- [TMS-1157] - Crash viewing HTML if files have been moved or renamed
- [TMS-1158] - HTML Archive Viewer shows largely blank page with Internet Explorer
- [TMS-1159] - Crash during archive if a template has never been opened

Export 1.0.1

- [TMS-1141] - Profile documents not included in archive
- [TMS-1142] - HTML documents with highlighting display *SafeValue must use [property]=binding*
- [TMS-1143] - HTML document highlighting displays rich text as html if the search text matches part of a tag name
- [TMS-1144] - HTML view filtering stops working if you navigate away from a view and then back
- [TMS-1145] - HTML documents should not filter out fields that don't match the search term
- [TMS-1146] - Database ACL not included in archive
