

CONFYStringLoad

Description

Obtains the error message associated with any error code returned from other API functions.

Syntax

```
status = CONFYStringLoad( <Status>, <Message>, <MessageBufferSize> )
```

Parameters

Parameter	Input/Output	Type	Description
Status	Input	Long	The numeric value returned by one of the CONFYxxx functions.
Message	Output	String	This is a string that will receive the message text associated with the status code.
MessageBufferSize	Input	Long	This is the maximum size that the string should be.

Example

```
Dim szBuffer As String*255
status = CONFYFindAndReplace(...)
CONFYStringLoad( status, szBuffer, 255 )
strErr = Left$( szBuffer, Instr( szBuffer, Chr(0) ) - 1 ) 'Convert the string to a LotusScript string
MessageBox strErr
```
