Teamstudio[®] for Notes[®] Installation Database

This database contains all the files necessary to install the following Teamstudio[®] for Notes[®] products.

- teamstudio analyzer**
Teamstudio Analyzer is a software development tool that lets Lotus Notes or Domino developers analyze the design of a database application, which helps with testing, debugging and documenting their database designs.
- teamstudio CIAOI**
Teamstudio CIAOI is a software development tool that provides check-in/check-out and version control for Lotus Notes or Domino application developers to work on the design of the same database at the same time, and to track changes to design documents.
- teamstudio configurator**
Teamstudio Configurator is a software development tool that lets Lotus Notes or Domino developers search and modify the design of a database application, or in the documents stored in a database application.
- teamstudio delta**
Teamstudio Delta is a software development tool that lets Lotus Notes or Domino developers identify the differences between two versions of a design document. It also integrates with CIAOI to show the differences between two versions of a design note.
- teamstudio design manager**
Teamstudio Design Manager is a software development tool that lets developers easily control difficult aspects of their design documents, such as sharing and managing a library of reusable design elements. They can browse, sort and search through their design documentation before they use Design Manager's design elements.
