

Set Agent Server

Use Teamstudio Build Manager to set the Run on Servers for scheduled agents.

To set agent server:

1. Select the Build or Promotion Path that relates to the database or template for which you want to apply a server to its scheduled agents.
2. Click the Create action button and select Enable Agents. The Enable Agents document appears:

teamstudio® Build Manager - Set Agent Server

Step: Set Agent Server

Active: Yes No

Description: (used for view display purposes) Sales Server

Comments:

Basics | **Step Control**

Enable Agents

Server Name: [Leave blank for local. Use * for Any server] Sales Server

Apply To: The checked scheduled agents in the target database will have the 'Run On Server' property set
 (Calculate Economic Value)

Options: Push these changes out to refreshed databases

Refresh Agent List

3. This document is active by default. Leave this setting.
4. Enter a descriptive name in the Description field (for example, Sales Server).
5. Enter the server name. Leave this field blank for a local PC. Use * for any server.
6. In the Apply To section, the checked scheduled or event triggered agents in the target database have the Run On Server property set.

Save and close the document.

The new Set Agent Server entry appears in the right pane, under the Build or Promotion Path to which it applies.
