

Profiler Log Database

To view Profiler log information

1. Open the Profiler log database.

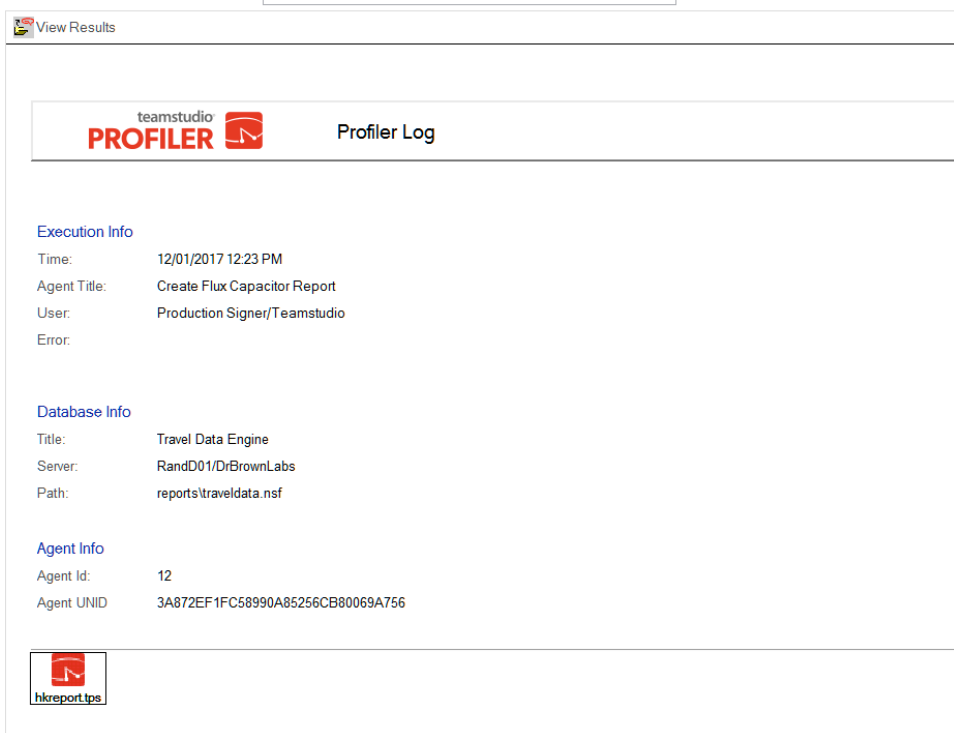

The screenshot shows the TeamStudio Reports Database interface. On the left is a navigation pane with categories like Analyzer Auditor, CIAO Reports, Configurator Reports, Delta Reports, Design Manager Copy History, Validator Reports, and Profiler. The Profiler category is selected, showing a table of logs. The table has columns for Time and Run By. One entry is highlighted with a red 'x' icon in the Time column, indicating an error.

| Time | Run By |
|---|-------------------|
| 12/01/2017 12:23:34 PM | Production Signer |
| x 12/01/2017 12:23:34 PM | Production Signer |

The red icon in the **Time** column indicates that Profiler encountered an error that prevented it from running on the selected code.

2. Open a document to view more details.

The screenshot shows the 'View Results' window for a Profiler Log. It displays the following information:

- Execution Info**
 - Time: 12/01/2017 12:23 PM
 - Agent Title: Create Flux Capacitor Report
 - User: Production Signer/Teamstudio
 - Error:
- Database Info**
 - Title: Travel Data Engine
 - Server: RandD01/DrBrownLabs
 - Path: reports/traveldata.nsf
- Agent Info**
 - Agent Id: 12
 - Agent UNID: 3A872EF1FC58990A85256CB80069A756

At the bottom left, there is a small icon for 'hkreport.tps'.

3. Click the **View Results** button at the top of the form. This launches Profiler to view the attached results.

 Profiler Client must be installed.

You can also save the attachment to your hard drive, launch Profiler from your Notes client and click **File > Open** to open the file.
