

Database Copy

Use Teamstudio Build Manager to automatically create database copies.

To copy a database:

1. Select the Build or Promotion Path that relates to the database or template for which you want to copy.
2. Click the Create action button and select Copy Database. The Copy Database document appears:

teamstudio® Build Manager - Create Copy

Step: Create Copy

Active: Yes No

Description: (used for view display purposes)

Comments:

Basics | Step Control

Copy Settings

Target:

Promote to Server Local

Promote to Path

This field must be relative to the data directory on the destination server. Leave blank to specify the data directory itself. If you omit the database filename, the current filename will be used. To use preserve special characters (e.g. for FilePath variable), check the following:

Do not replace special characters

Copy Documents?

This is a standard Notes selection formula. Leave this field blank if you do not want documents copied.

Overwrite? Yes

3. The Copy Database document appears.
4. The Copy Database document is active by default. Leave this setting.
5. Enter a descriptive name in the Description field (for example, Copy of CRM for Test).
6. Enter the Promote to Server name. This field cannot be blank.
7. Enter the Promote to Path.

Note: This field must be relative to the data directory on the destination server. Leave this field blank to specify the data directory itself. If you omit the database name, the current name is used.

8. Enter a Notes selection formula for Copy Documents (for example, SELECT @ALL) if you have documents that must travel with the database or template
9. The Overwrite field is checked by default. This overwrites old copies of the file being copied

If you uncheck this setting, the Fail on Exit? option appears (checked by 73 default), allowing you to specify that a promotion fails when the Overwrite field is unchecked and the destination database you are copying already exists.

Save and close the document.

The new Copy Database entry appears in the right pane, under the Build or Promotion Path to which it applies.
